

no more lifting or spilling

no storing

never run out

tastes great

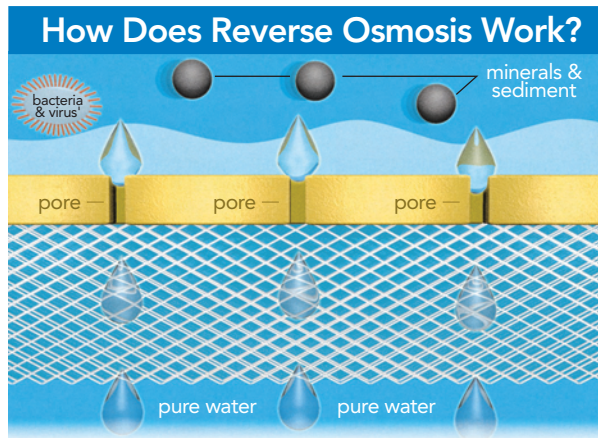

Your new SmartCooler

The water purification system used for your new SmartCooler is called **REVERSE OSMOSIS**.

Reverse Osmosis Is Amazing!!!

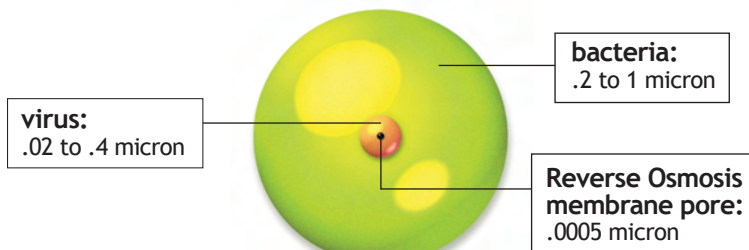

- It can turn ocean water into drinking water!
- Entire cities wouldn't exist without Reverse Osmosis (because they are without natural fresh water.)
- It removes virtually everything from your water!

Water is forced by pressure through microscopic "holes" (or pores) in a membrane inside the purification system. These holes are so small that, basically, only incredibly pure water can pass through. Minerals, sediment, etc. are flushed away – automatically.

Just How Small Are These Holes?

Well, they are 1/5,000,000 of an inch – or 1 to 15 angstrom.

How small is that? If you were to take just one square foot of this membrane and blow it up to the size of the pacific ocean, one pore would be the size of a dime! **You're left with just H₂O!**

independently tested and certified

Your new SmartCooler

is designed to provide the best performance against a wide range of impurities in your drinking water. The purification system inside this cooler consists of 2 high capacity filters to safeguard every drop of pure, fresh-squeezed H₂O that goes into your cup.

Independently Certified

This dual-stage purification system features a primary filter whose job is to remove dirt, rust and sediment from your water. The secondary filter is 1 micron carbon block filter that effectively **reduces cysts, lead, and chlorine**. This system provides superior filtration capabilities with a commercial-grade 1500 gallon capacity.

Is it as Pure as Bottled Water?

Here's the results of an independent lab test on our water so you can see for yourself:

COMPARE:	bottled water	CoolerSmart's water
THM's (present if chlorine is in water)	0	0
Lead	0	0
Volatile Organic Chemicals	0	0
Herbicides, Pesticides, & PCB's	0	0
Aluminum	0	0
Arsenic	?	0
Mercury	?	0
Cysts (such as cryptosporidium)	0	0

no interruptions

What About Taste?

This water purification system leaves the beneficial minerals in your drinking water. You may or may not taste these minerals – such as magnesium or potassium– depending on their content in your tap water. So, if your taste buds prefer the taste of **spring water** then this system is for you!

All you're left with is H₂O and Minerals!
